

## Easy as 1 - 2 - 3 : Get started with WebToGo services:

- 1** Discuss with our friendly Sales Specialist on the type of website you would need. Provide us with the company logo, images and marketing write-ups, etc. that will form the initial content of your website.
- 2** Our Web Designers will come up with a customized look for your site, which you can review and further enhance. Once the design is finalized, we will proceed with the actual web HTML coding and integrate into the WebToGo Content Management System.
- 3** You can now input text, upload images and take control of your site's contents. Now you are ready to go and market your website.

## FREQUENTLY ASKED QUESTIONS

**1. Why should we use a customized design and not just a simple template?**

Using a template, without customizing it, would fail to showcase your brand, image and value proposition.

**2. How does WebToGo's websites differ from static sites?**

Our setup allows the users to dynamically upload the contents of their website, as opposed to static sites which can only be modified through HTML codes. Static sites are usually updated by the web developers themselves, which is time consuming, prone to errors and expensive.

WebToGo provides a user friendly and intuitive interface where text and images can be uploaded by the user. This results in a website that is up-to-date, relevant and engaging.

**3. What is included in the setup fee?**

The setup fee includes consultation, customized design, DNS setup, email account setup, integration into WebToGo's System, and website statistics. This is a one time fee.

**4. Why do you have a monthly subscription charge?**

The monthly subscription pays for the server hosting and the usage of internet bandwidth, which WebToGo also needs to purchase from data centers. This also allows us to provide clients with continuous development on the WebToGo backend system for us to further enhance its features.
